

Emergency Technologies, Inc. is NEMSIS Silver Compliant

Raleigh, North Carolina – May 4, 2007 — The National EMS Information System's (NEMSIS) Technical Assistance Center has certified Emergency Technologies, Inc. (ETI) as a NEMSIS silver compliant software vendor. ETI's Visual Fire and Visual EMS meet the data gathering, reporting and security requirements established by the National Emergency Medical Services Information System (NEMSIS).

Emergency Technologies has worked very hard to conform to this emerging, national standard to ensure that Visual EMS has the ability to collect and export the NEMSIS requirements. The NEMSIS requirements are very comprehensive, encompassing more than 400 data fields, specific to the National Highway Traffic Safety Administration (NHTSA) 2.2.1 dataset.

"ETI has embraced the new, NEMSIS standard, and is committed to providing cutting-edge solutions that meet the needs of pre-hospital EMS providers." says Gar Keaton, President of Emergency Technologies, Inc. "We are excited that Visual EMS has earned this national certification."

ETI's Visual EMS e-PCR module manages information on patients and the care that was provided to them by the personnel on the scene of an incident. It is fully integrated with CAD systems and customizable to handle an agency's codes and protocols. Data stored in Visual EMS can be exported for reporting, billing or other purposes and is HIPAA compliant.

About Emergency Technologies, Inc.

Emergency Technologies, Inc. (ETI) is a software and services company headquartered in Raleigh, North Carolina that is focused on developing application software exclusively to Fire & EMS Departments throughout the United States. The company designs, develops, markets, supports and implements enterprise-level Fire Records Management Systems, EMS Patient Reporting Systems and Field Based Reporting systems that are tightly integrated with multiple Computer-Aided Dispatch vendors. About NEMSIS

www.nemsis.org

NEMSIS stands for the National Emergency Medical Services Information System. NEMSIS is the national repository that will be used to store EMS data from every state in the nation, allowing for a national EMS dataset. The intent is to use this information to impact public health care procedures and response times. The three primary goals and objectives of NEMSIS are: to implement an electronic EMS documentation system in every local EMS system; implement a state EMS information system in every state and territory; and implement a national EMS database.
