

Outagamie County, Wisconsin Fire Departments go-live on Emergency Technologies Visual Fire software

January 31, 2007 – Raleigh, NC – Emergency Technologies, Inc. is pleased to announce that Outagamie County Wisconsin has gone-live the Visual Fire software. In April 2006, Emergency Technologies executed a contract with the Outagamie County MIS Department for the installation of a Multi-Jurisdiction Fire Records Management software system. The solution will provide the capability of consistent county-wide reporting. Additionally, the system seamlessly integrates with the existing Motorola Computer Aided Dispatch (CAD) system, and would provide multi-department functionality to stations throughout the County.

"We are honored that Emergency Technologies, Inc. has been selected as Outagamie County's fire and EMS software solution," says Gar Keaton, President of Emergency Technologies, Inc. "All agencies are able to operate on the same system without compromising their individual departmental requirements."

The Visual Fire suite, which is developed using familiar and proven Microsoft technology, operates on industry standard Windows Server and SQL Server database. The Visual Fire software suite provides for Fire Incident Reporting in compliance with the National Fire Incident Reporting System (NFIRS), EMS Patient Reporting, Mobile Field Reporting, Hydrant information and Structural Pre-Plans. ETI developed and advanced multi-department configuration to accommodate the unique reporting requirements of each fire department within Outagamie County, while maintaining a consistent County standard. Multi-department functionality within Visual Fire will provide the Outagamie County Fire Departments with modern technology that will increase operational efficiency county-wide.

Emergency Technologies, Inc. (ETI) is a software and services company headquartered in Raleigh, North Carolina that is focused on developing application software exclusively to Fire & EMS Departments throughout the United States. The company designs, develops, markets, supports and implements enterprise-level Fire Records Management Systems, EMS Patient Reporting Systems and Field Based Reporting systems that are tightly integrated with multiple Computer-Aided Dispatch vendors.
